

# NetShade

**NetShade** is an app for [Mac OS X](#) and [iOS](#) which provides access to anonymous proxy and VPN servers. These servers include public [HTTP/HTTPS](#) proxies, as well as Rayner Software's own subscription-based proxies. NetShade's VPN servers run IPSec, and the proxy servers act using the HTTP/HTTPS web proxy standard.

## History

**NetShade** version 1.0 was released in 2004 for Mac OS X. The first version had no subscription-based [proxy](#) service, only a listing of public proxies. A dedicated NetShade proxy server was added for version 2.0 in 2005. Version 3, released in 2007, added a second NetShade proxy server, providing presence in both the [US](#) and [UK](#). The current version, 7.0.1, includes dedicated proxy servers in the US, [Canada](#), UK, [Czech Republic](#), [Germany](#), [France](#), [Italy](#), and the [Netherlands](#).
