xB Browser

xB Browser (formerly known as **TorPark** and **Xerobank browser** [5]) was a [web browser](#) designed to run on both the [Tor](#) and XeroBank anonymity networks, and is available as component of the xB Machine and the xB Installer.

It is designed for use on [portable media](#) such as a [USB flash drive,](#)[6] but it can also be used on any [hard disk drive.](#)[7] As such, a secure and [encrypted](#) connection to any of the Tor or XeroBank [routers](#) can be created from any [computer](#) with a suitable Internet connection,[7] and the browser clears all data that was created on the portable drive upon exit or on demand.[6]

In 2007, TorPark was rebranded as xB Browser. At the time, it claimed 4 million downloads,[6] increasing to over 6.5 million by February 2008.[8]

History

Steve Topletz co-released Torpark v.1.5.0.7 with [CULT OF THE DEAD COW](#)/[Hacktivismo](#) on 19 September 2006[9][10] after more than one year of development based on [Portable Firefox](#) web browser with built in support for Tor.[1][4]

Network usage

xB Browser routes [Internet](#) traffic through the [Tor network](#), obscuring the originating [IP](#) address and [encrypting](#) the data.[6]

xB Browser is optimized for use on the XeroBank anonymity network, which is a private and commercial [broadband](#) network operated by Xero Networks AG.[11]

Features

Besides the anonymous networks, xB Browser uses following [add-ons](#):

- [Adblock Plus,](#)[12]
- [Cookies](#) and [Flash cookies](#) removal,[6][8]
- Browser history clearing after closing[6]
